

BEFORE

AFTER

The Callux express dry pedicure foot treatment is a simple 4 step treatment

Products needed: Callux Antibacterial Spray, Callux Foam, Callux Foot File with disposable abrasives and Callux Cream.

Step 1: Spray the feet with Callux Antibacterial Spray. Let dry.

Step 2: Apply the foam to areas of concern- soles of the feet and any calluses/corns. A little goes a long way, 2-3 pumps. Let it work for 3-5 min. Remove excess foam with paper towel.

Step 3: File the feet using your Callux Foot File and the required disposable abrasive grit/s

Step 4: Apply the Callux Cream and massage it into the skin.

Callux Pro Softener Foam 30% - Perfect for Dry Pedicure Treatments

Product Description: A foam based Callus softener that is very convenient, easy to apply and it intensely softens skin and calluses on hands and feet.

What the product does for you:

- Foam formula is convenient to apply.
- Fast Acting.
- Intensely softens the skin and calluses.
- Makes filing the callused areas a breeze
- No prior foot soaking required

Why you need it:

Easy to use, it allows you to thoroughly cover the skin with a layer of the product, ensuring a powerful but gentle effect. After applying the product, the skin remains smooth and silky. The product is safe for diabetics, expecting and nursing mothers, and was created with these groups of customers in mind. This is the ideal product to help minimize calluses for dry pedicures.

Recommended use: Apply an appropriate amount of foam on hands and/or feet, especially on callused areas. Leave for about 3-5 minutes. Then proceed to remove calluses.

Sizes: 150ml and 1L refill.

Precautions: For external use only, avoid contact with eyes, keep out of reach of children, read the directions for use carefully.
