03 PRODUCT INSTRUCTION

- 1 For professional use only

04 OPERATION INSTRUCTION

- 1 Standard Gel Cure Mode
Connect with the power adapter. Please only use the 24V adapter supplied, if a different adapter is used the lamp will be damaged.
1.1 Default setting 30s, in standby the user can select times by pressing 10s/30s/60s/90s (low heat mode).
1.2 When 'Standard Gel Cure Mode' is selected only the blue bulbs will light up.
- 2 Health Therapy and Gel Cure Mode
2.1 Push Standard/Health button and the display will change from default to 'E30S'
2.2 When an 'E' is seen on the display, both the blue (gel cure) and red (therapy) bulbs will light up, creating a pink glow. In this mode you can change the default time by simply selecting the required time button.
2.3 Push Standard/Health button again to exit health therapy and gel cure mode.

3 Therapy Red Light mode

3.1 Push the Red-Light button and only the red-light bulbs will light up. The countdown will start and be set to the default to 240s. Press the Red-Light button again to increase the timer to 360s. Once the timer finishes the countdown, the sensor will start the countdown again once a hand is inserted into the lamp. PLEASE NOTE: Therapy Red Light mode will not cure gel.
